```

Astropy is a Python package that offers tools and functions that are useful for various tasks in astronomy and astrophysics, including and not limited to planning an observation, reducing the data from the observation, analysing it, and other numerical and modeling tasks.

10 Coordinated: Packages maintained by astropy
```

```
11  
12 Affiliated: Other packages for astronomy
```

Subpackages

units	Handles defining, converting between, and performing arithmetic with physical quantities
constants	Contains a number of physical constants useful in Astronomy
coordinates	Contains classes for celestial/spatial coordinates and their velocity components, and tools to uniformly convert between common coordinate systems.

Coordinated packages

astroquery	Tools for querying online astronomical data sources.
ccdproc	Package to do basic CCD data reduction.
photutils	Photometry and related image-processing tools.

Affiliated packages

astroML	Tools for machine learning and data mining in Astronomy.
astroplan	An open source Python package to help astronomers plan observations.
dust_extinction	Interstellar dust extinction curves

10
11
12
13
14
```

```
1  FITS (Flexible Image Transport
2  System) is the data format most
3  widely used within astronomy for
4  transporting, analyzing, and
5  archiving scientific data files.
6  FITS is much more than just
7  another image format (such as JPG
8  or GIF) and is primarily designed
9  to store scientific data sets
10 consisting of multidimensional
11 arrays (images) and 2-dimensional
12 tables organized into rows and
13 columns of information
14
```

Segments of
FITS files–
Header/Data
Units (HDU)

Header Unit

a sequence of
fixed-length 80-character
keyword records

Data Unit

if present, immediately
follows the last 2880-byte
block in the header unit
as is a value or comment
for the keyword

```
1  from astropy.io import fits
2  fits_img_fn =
3  fits.util.get_testdata_filepath('test0.fits')
4  # Data that came with astropy installation
5  hdul = fits.open(fits_img_fn) # header data unit (HDU)
6  list
